Using Pressure Ulcer Risk Assessment Tools in Care Planning

Presented by Elizabeth A. Ayello
Ph.D., RN, ACNS-BC, CWON, ETN, MAPWCA, FAAN
Excelsior College School of Nursing
Welcome!

Thank you for joining this webinar about how to use pressure ulcer risk assessment tools in care planning.
A Little About Myself…

- Board certified wound and ostomy nurse
- Clinical editor of the journal *Advances in Skin and Wound Care*
- Vice president of the World Council of Enterostomal Therapists (WCET)
- Faculty member of Excelsior College School of Nursing
- Author of numerous articles and two books on wound care
- Past president of the National Pressure Ulcer Advisory Panel
- Former consultant to CMS on some skin conditions
Today We Will Talk About

• Pressure ulcer risk factor assessment
• Pressure ulcer risk assessment tools
• Using pressure ulcer risk assessment tools in care planning

These topics were introduced in your 1-day training. Today, we will revisit them in depth.

Please make a note of your questions. Your Quality Improvement (QI) Specialists will follow up with you after this webinar to address them.
Attributes of Risk Factor Assessment

- Multifaceted
- Ongoing
- Standardized

*Standardized risk assessment is a prerequisite to implementing an evidence-based pressure ulcer prevention protocol.*
Purpose of Risk Factor Assessment

Risk factor assessment facilitates—

• Clinical decisionmaking
• Selective targeting of preventive interventions
• Care planning
• Communication between health care workers and care settings
Purpose of Risk Factor Assessment

Risk factor assessment identifies—

• Patients who are more likely to develop pressure ulcers
• Different components of risk for pressure ulcers
When To Do Risk Assessment

• On admission
  – Within 8 hours

• Reassessment frequency
  – Based on patient’s acuity

• Significant change in patient’s condition
Adult tools used in the United States include—

• Norton Scale
  
Begins on Page 136

• Braden Scale
  
Begins on Page 134

Today, we will focus on the Braden Scale.
1. Sensory/perception
2. Moisture
3. Activity
4. Mobility
5. Nutrition
6. Friction/shear
<table>
<thead>
<tr>
<th>SENSORY PERCEPTION</th>
<th>MOISTURE</th>
<th>ACTIVITY</th>
<th>MOBILITY</th>
<th>NUTRITION</th>
<th>FRICITION &amp; SHEAR</th>
<th>Date of Assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Completely Limited Unresponsive (does not moan, 1. Constantly Noisy Skin is kept moist almost constantly by perspiration, urine, 1. Bedfast Confined to bed. 1. Completely Immobile Does not make even slight changes in body or extremity position without assistance 1. Very Poor Never eats a complete meal. Rarely eats more than 1/2 of any food offered. Eats 2 servings or less of protein (meat or dairy products) per day. Takes fluids poorly. Does not take a liquid \text{ OR} dietary supplement \text{ OR} is NPO and/or maintained on clear liquids or 11s for more than 5 days 1. Problem Requires moderate to maximum assistance in moving. Complete lifting without sliding against sheets is impossible. Frequently slides down in bed or chair, requiring frequent repositioning with maximum assistance. Spasticity, contractures or agitation leads to almost constant friction</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. Very Limited Responds only to painful stimuli. Cannot communicate discomfort except by moaning or restlessness. \text{ OR} limited ability to feel pain over most of body. 2. Very Mois! Skin is often, but not always moist. Linen must be changed at least once a shift. 2. Chairfast Ability to walk severely limited or non-existent. Cannot bear own weight and/or must be assisted into chair or wheelchair. 2. Very Limited Makes occasional slight changes in body or extremity position but unable to make frequent or significant changes independently. 2. Probably Inadequate Rarely eats a complete meal and generally eats only about 1/2 of any food offered. Protein intake includes only 3 servings of meat or dairy products per day. Occasionally will take a dietary supplement. \text{ OR} receives less than nutritional amount of liquid diet or tube feeding 3. Potential Problem Moves feebly or requires minimum assistance. During a move skin probably slides to some extent against sheets, chair, restraints or other devices. Maintains relatively good position in chair or bed most of the time but occasionally slides down.</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>3. Slightly Limited Responds to verbal commands, but cannot always communicate discomfort or the need to be turned. \text{ OR} has some sensory impairment which limits the ability to feel pain or discomfort in 1 or 2 extremities. 3. Occasionally Mois! Skin is occasionally moist, requiring an extra linen change approximately once a day. 3. Walks Occasionally Walks occasionally during day, but for very short distances, with or without assistance. Spends majority of each shift in bed or chair 3. Slightly Limited Makes frequent though slight changes in body or extremity position independently. 3. Adequate Eats over half of most meals. Eats a total of 4 servings of protein, meat, dairy products per day. Occasionally will refuse a meal, but will usually take a supplement when offered \text{ OR} is on a tube feeding or TPN regimen which probably meets most of nutritional needs. 4. No Limitation Makes major and frequent changes in position without assistance. 4. No Apparent Problem Moves in bed and in chair independently and has sufficient muscle strength to lift up completely during move. Maintains good position in bed or chair. 4. Rarely Mois! Skin is usually dry, linen only requires changing at routine intervals. 4. Walks Frequently Walks outside room at least twice a day and inside room at least once every two hours during waking hours 4. Excellent Eats most of every meal. Usually eats a total of 4 or more servings of meat and dairy products. Occasionally eats between meals. Does not require supplementation.</td>

How To Score Risk Factors

• Score risk factors from 1 to 4 except—
  – Score friction/shear from 1 to 3.

• Risk factor score of 1 is the lowest level of functioning.

• If a category falls between two numbers, choose the lower score.
How To Interpret Braden Score

• **Total score** ranges from **6 to 23**.

• **Lower Braden score** indicates **higher** level of risk for pressure ulcer development.

• In most cases, a score of **18 or less** indicates at-risk status. Tailor this number to fit your hospital or unit.

• **Low subscale score** indicates risk from that factor. Address all deficits in care planning.

*Do not rely on the total score alone.*
With the Braden Scale

Low Numerical Score =

Higher Pressure Ulcer Risk
Limits of Risk Scores

• Some assessment tools include a scoring system to predict pressure ulcer risk:
  – No tool has **perfect** predictability.
  – Even patients with a **low risk score** may need intervention.
  – If you base a patient’s individualized care plan on the risk score alone, the care plan will not be tailored to all of his or her risk factors.
  – Instead, use a comprehensive approach to risk assessment to identify pressure ulcer risk factors.

*Don’t rely on scores alone.*
Comprehensive Pressure Ulcer Risk Assessment

• **H**istory.
• **A**ssess co-morbidities, medications.
• **L**ook at the skin.
• **T**ouch the skin.

© Ayello, 2012
History: It’s Not Just About Score

© Ayello, 2006
Assess Co-Morbidities & Medications

• Perfusion and oxygenation
• Nutritional deficits
• Higher rates of PU
  – Corticosteroid use
  – CHF
  – COPD
  – PVD
  – DM
  – Obesity
Look at Skin

Skin Status
Bony prominences, especially sacrum and heels

Skin to skin

Under medical devices
Skin temperature may predict pressure ulcer risk.
Risk Assessment

• Critically ill patients
  – Number of hypotensive episodes, hemodynamic instability
  – Medical devices

• Perioperative patients
  – Length of surgery
  – Number of hypotensive episodes during surgery
  – Low core temperatures during surgery
  – Amount of time immobilized before and after surgery

© Ayello, 2014
Clinical Decision making Based on Pressure Ulcer Risk

Is my patient at risk for a pressure ulcer?
What is the plan of care?
Using Assessment Tools

Assessment tools should be used—

• By trained staff
• In conjunction with clinical judgment and review of other risk factors
• To identify a patient’s risk factors
• To plan care that addresses these factors
  – Prevention strategies should be consistent with the patient’s preferences and care goals.

If your hospital has an electronic health record system, integrate assessment tools into the system.
Strategies for Using Risk Assessment Tools

• Use valid and reliable tools.
• Train staff in how to properly use risk assessment tools.
• Assess all patients.
• Tailor interventions based on patient-specific areas of risk.

Patients who previously had pressure ulcers are at risk for getting them again, especially under similar circumstances. Plan appropriately.
Using Risk Assessment Tools in Care Planning

Take these steps:

1. Review areas of risk identified by the Braden Scale for a specific patient and other risk factors included as part of a structured comprehensive risk assessment.

2. Select interventions to address each area of risk that are consistent with patient preference and care goals.

3. Communicate a tailored pressure ulcer prevention plan to all staff who interact with the patient. Also share it with the patient and their family members.
# Planning Care for Each Category

## Assessment and Care Planning

<table>
<thead>
<tr>
<th>Braden Category</th>
<th>Braden Score: 1</th>
<th>Braden Score: 2</th>
<th>Braden Score: 3</th>
<th>Braden Score: 4</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Sensory Perception</strong></td>
<td><em>Completely limited</em>&lt;br&gt; - Skin assessment and inspection q shift. Pay attention to heels.&lt;br&gt; - Elevate heels and use protectors.&lt;br&gt; - Consider specialty mattresses or bed.&lt;br&gt; - Use pillows between knees and bony prominences to avoid direct contact.</td>
<td><em>Very limited</em>&lt;br&gt; - Skin assessment and inspection q shift. Pay attention to heels.&lt;br&gt; - Elevate heels and use protectors.&lt;br&gt; - Consider specialty mattresses or bed.</td>
<td><em>Slightly limited</em>&lt;br&gt; - Skin assessment and inspection q shift. Pay attention to heels.&lt;br&gt; - Elevate heels and use protectors.&lt;br&gt; - Consider specialty mattresses or bed.</td>
<td><em>No limitation</em>&lt;br&gt; - Encourage patient to report pain over bony prominences.&lt;br&gt; - Check heels daily.</td>
</tr>
<tr>
<td><strong>Moisture</strong></td>
<td><em>Constantly Moist</em>&lt;br&gt; - Skin assessment and inspection q shift.&lt;br&gt; - Use moisture barrier ointments (Protective barriers).&lt;br&gt; - Moisture dry unbroken skin.&lt;br&gt; - Avoid hot water. Use mild soap and soft cloths or package cleanser wipes.&lt;br&gt; - Check incontinence pads frequently (q2-3h) and change as needed.&lt;br&gt; - Apply petroleum jelly if appropriate.&lt;br&gt; - If stool incontinence consider bowel training and toileting after meals or Rectal tube if appropriate.&lt;br&gt; - Consider low air loss bed.</td>
<td><em>Occasionally Moist</em>&lt;br&gt; - Use moisture barrier ointments (Protective skin barriers).&lt;br&gt; - Moisture dry unbroken skin.&lt;br&gt; - Avoid hot water. Use mild soap and soft cloths or package cleanser wipes.&lt;br&gt; - Check incontinence pads frequently (q2-3h).&lt;br&gt; - Avoid use of diapers but if necessary check frequently (q2-3h) and change as needed.&lt;br&gt; - Apply petroleum jelly if appropriate.&lt;br&gt; - If stool incontinence consider bowel training and toileting after meals.&lt;br&gt; - Consider low air loss bed.</td>
<td><em>Rarely Moist</em>&lt;br&gt; - Encourage patient to use lotion to prevent skin cracks.&lt;br&gt; - Encourage patient to report any moisture problem (such as under breasts).</td>
<td><em>No moisture</em>&lt;br&gt;</td>
</tr>
<tr>
<td><strong>Activity</strong></td>
<td><em>Bedfast</em>&lt;br&gt; - Skin assessment and inspection q shift.&lt;br&gt; - Position prone if appropriate or elevate HOB no more than 30 degrees.&lt;br&gt; - Position with pillows to elevate pressure points off of the bed.&lt;br&gt; - Consider specialty bed.&lt;br&gt; - Elevate heels off bed and/or heel protectors.&lt;br&gt; - Consider physical therapy consult for conditioning and W/C assessment.&lt;br&gt; - Turn/reposition q 1-2 hours.&lt;br&gt; - Post turning schedule.&lt;br&gt; - Teach or do frequent small shifts of body weight.</td>
<td><em>Chairfast</em>&lt;br&gt; - Consider specialty chair pad.&lt;br&gt; - Consider standing, weight distribution, balance, stability, and pressure relief when positioning individuals in chair or wheelchair.&lt;br&gt; - Instruct patient to reposition q 15 minutes when in chair.&lt;br&gt; - Stand every hour.&lt;br&gt; - Pad bony prominences with foam wedges, rolled blankets or towels.&lt;br&gt; - Consider physical therapy consult for conditioning and W/C assessment.</td>
<td><em>Walks Occasionally</em>&lt;br&gt; - Provide structured mobility plan.&lt;br&gt; - Consider chair cushion.&lt;br&gt; - Consider physical therapy consult.</td>
<td><em>Walks Frequently</em>&lt;br&gt; - Encourage ambulating outside the room at least b.i.d.&lt;br&gt; - Check skin daily.&lt;br&gt; - Monitor balance and endurance.</td>
</tr>
<tr>
<td><strong>Mobility</strong></td>
<td><em>Completely Immobile</em>&lt;br&gt; - Skin assessment and inspection q shift.&lt;br&gt; - Turn/reposition q 1-2 hours.&lt;br&gt; - Post turning schedule.&lt;br&gt; - Teach or do frequent small shifts of body weight.&lt;br&gt; - Elevate heels.&lt;br&gt; - Consider specialty bed.</td>
<td><em>Very Limited</em>&lt;br&gt; - Skin assessment and inspection q shift.&lt;br&gt; - Turn/reposition q 1-2 hours.&lt;br&gt; - Post turning schedule.&lt;br&gt; - Teach or do frequent small shifts of body weight.&lt;br&gt; - Elevate heels.&lt;br&gt; - Consider specialty bed.</td>
<td><em>Slightly Limited</em>&lt;br&gt; - Skin assessment and inspection q shift.&lt;br&gt; - Turn/reposition frequently.&lt;br&gt; - Teach frequent small shifts of body weight.&lt;br&gt; - PT consult for strengthening/conditioning.&lt;br&gt; - Gait belt for assistance.</td>
<td><em>Excellent</em>&lt;br&gt; - Out of bed for all meals.&lt;br&gt; - Provide food choices.&lt;br&gt; - Other Nutrition Supplements if NPO for &gt; 24 hours, discuss plan with MD.</td>
</tr>
<tr>
<td><strong>Nutrition</strong></td>
<td><em>Very Poor</em>&lt;br&gt; - Nutrition Consult.&lt;br&gt; - Skin assessment and inspection q shift.&lt;br&gt; - Offer Nutrition Supplements and water.&lt;br&gt; - Encourage family to bring favorite foods.&lt;br&gt; - Monitor Nutritional Intake.&lt;br&gt; - If NPO for &gt; 24 hours, discuss plan with MD.&lt;br&gt; - Record dietary intake and I &amp; O if appropriate.</td>
<td><em>Probable Inadequate</em>&lt;br&gt; - Nutrition Consult.&lt;br&gt; - Skin assessment and inspection q shift.&lt;br&gt; - Offer Nutrition Supplements and water.&lt;br&gt; - Encourage family to bring favorite foods.&lt;br&gt; - Monitor Nutritional Intake.&lt;br&gt; - Small frequent meals.&lt;br&gt; - If NPO for &gt; 24 hours, discuss plan with MD.&lt;br&gt; - Record dietary intake and I &amp; O if appropriate.</td>
<td><em>Adequate</em>&lt;br&gt; - Monitor nutritional intake.&lt;br&gt; - If NPO for &gt; 24 hours, discuss plan with MD.&lt;br&gt; - Record dietary intake and I &amp; O if appropriate.</td>
<td><em>Excellent</em>&lt;br&gt; - Out of bed for all meals.&lt;br&gt; - Provide food choices.&lt;br&gt; - Other Nutrition Supplements if NPO for &gt; 24 hours, discuss plan with MD.</td>
</tr>
<tr>
<td><strong>Friction &amp; Shear</strong></td>
<td><em>Problem</em>&lt;br&gt; - Skin assessment and inspection q shift.&lt;br&gt; - Minimum of 2 per day – draw sheet to pull patient up in bed.&lt;br&gt; - Keep bed linen clean, dry, and wrinkle free.&lt;br&gt; - Apply or elbow/heel protectors to intact skin over elbows and heels.&lt;br&gt; - Elevate head of bed 30 degree or less.</td>
<td><em>Potential Problem</em>&lt;br&gt; - Skin assessment and inspection q shift.&lt;br&gt; - Minimum of 2 per day – draw sheet to pull patient up in bed.&lt;br&gt; - Keep bed linen clean, dry, and wrinkle free.&lt;br&gt; - Apply transparent dressing or elbow/heel protectors to intact skin over elbows and heels.&lt;br&gt; - Avoid massaging pressure points.</td>
<td><em>No apparent problem</em>&lt;br&gt;</td>
<td></td>
</tr>
</tbody>
</table>

*Begins on Page 138*
Select Interventions

• Bariatric patients
  – Appropriate size and weight of equipment, including pressure redistribution support surfaces.
  – Are staff trained to care for these patients?

• Critically ill patients
  – Choose pressure redistribution support surfaces based on individual’s perfusion and ability to be turned.
  – “Slow, gradual turns”; allow time for hemodynamic and oxygenation stabilization.

• Perioperative patients
  – Facial pads for prone position.
  – Operating room support surfaces on table.
  – Heel suspension devices.
Case Study

Your hospitalized patient—

• Responds to verbal commands
• Reports no pain
• Can turn and reposition without assistance but needs frequent reminders
• Needs encouragement to walk more than twice a day outside his/her room
• Eats some of the food on his/her tray
• Has not suffered any recent weight loss
• Has moist skin from urinary and fecal incontinence

What is the total Braden Scale score for this patient, and is he/she at risk for a pressure ulcer?

Plan care for **pain**.

- Assess using validated and reliable pain assessment scales; use specific tools or observe body language or other cues for nonverbal patients.

- Prevent and manage pain.
  - Do this when lifting or transferring patient.
  - Coordinate pain medication administration with care.

Selected Care Planning Examples

- Plan care for moisture problems.
- Use pH balanced skin cleaning products.
- Don’t massage or vigorously rub skin at risk for pressure ulcers.
- Cope with dry skin.
  - Apply moisturizing products such as lotions and creams.
- Cope with wet skin (incontinence, perspiration).
  - Clean skin promptly.
  - Protect skin with products such as skin sealants, lotions, and creams.

<table>
